

Top Six Weld County Native Weeds

There are lots of nuisance plants in the county. Some of these plants are actually native species in North America. The top six native weeds that can still cause problems for landowners in Weld County are Spreading Orach, Common Cocklebur, Marshelder, Curlycup Gumweed, Common Knotweed, and Horseweed. With these species being native, there are no laws mandating the control of these species. However, we are here to help answer questions, make positive ID and provide control options.

Spreading Orach

Common Cocklebur

Marshelder

Curlycup Gumweed

Common Knotweed

Horseweed/Marestail
